

Corne Choc Pro — all-layer keycap stickers (German · macOS)

One sticker per key shows every layer at once, color-coded by layer. Print on sticker foil at **100% / actual size** (turn OFF "fit to page"). Each cell is 13 mm; cut on the dashed line and keep it centered (caps are negatively curved). Home-row modifiers are separate mini-stickers (bottom) for the front edge of the cap.

how to read each sticker

- top-left layer 0 · BASE
- top-right layer 1 · NUM
- bottom-left layer 2 · SYM
- bottom-right layer 4 · FUN
- center layer 3 · NAV
- orange = modifiers ⌘ ⌥ ⌞ ⌟ (home-row mods are separate front-edge stickers below)

Thumbs: big glyph = tap · small bottom-left tag = layer reached by **holding** · top-right **blue** = what it types on the NUM layer · bottom-right **violet** = its FUN-layer action (STUD = ZMK Studio unlock).

Home-row modifiers — print **smaller**, stick on the **front edge** of A S D F / J K L ; :
